PROBLEM STATEMENT

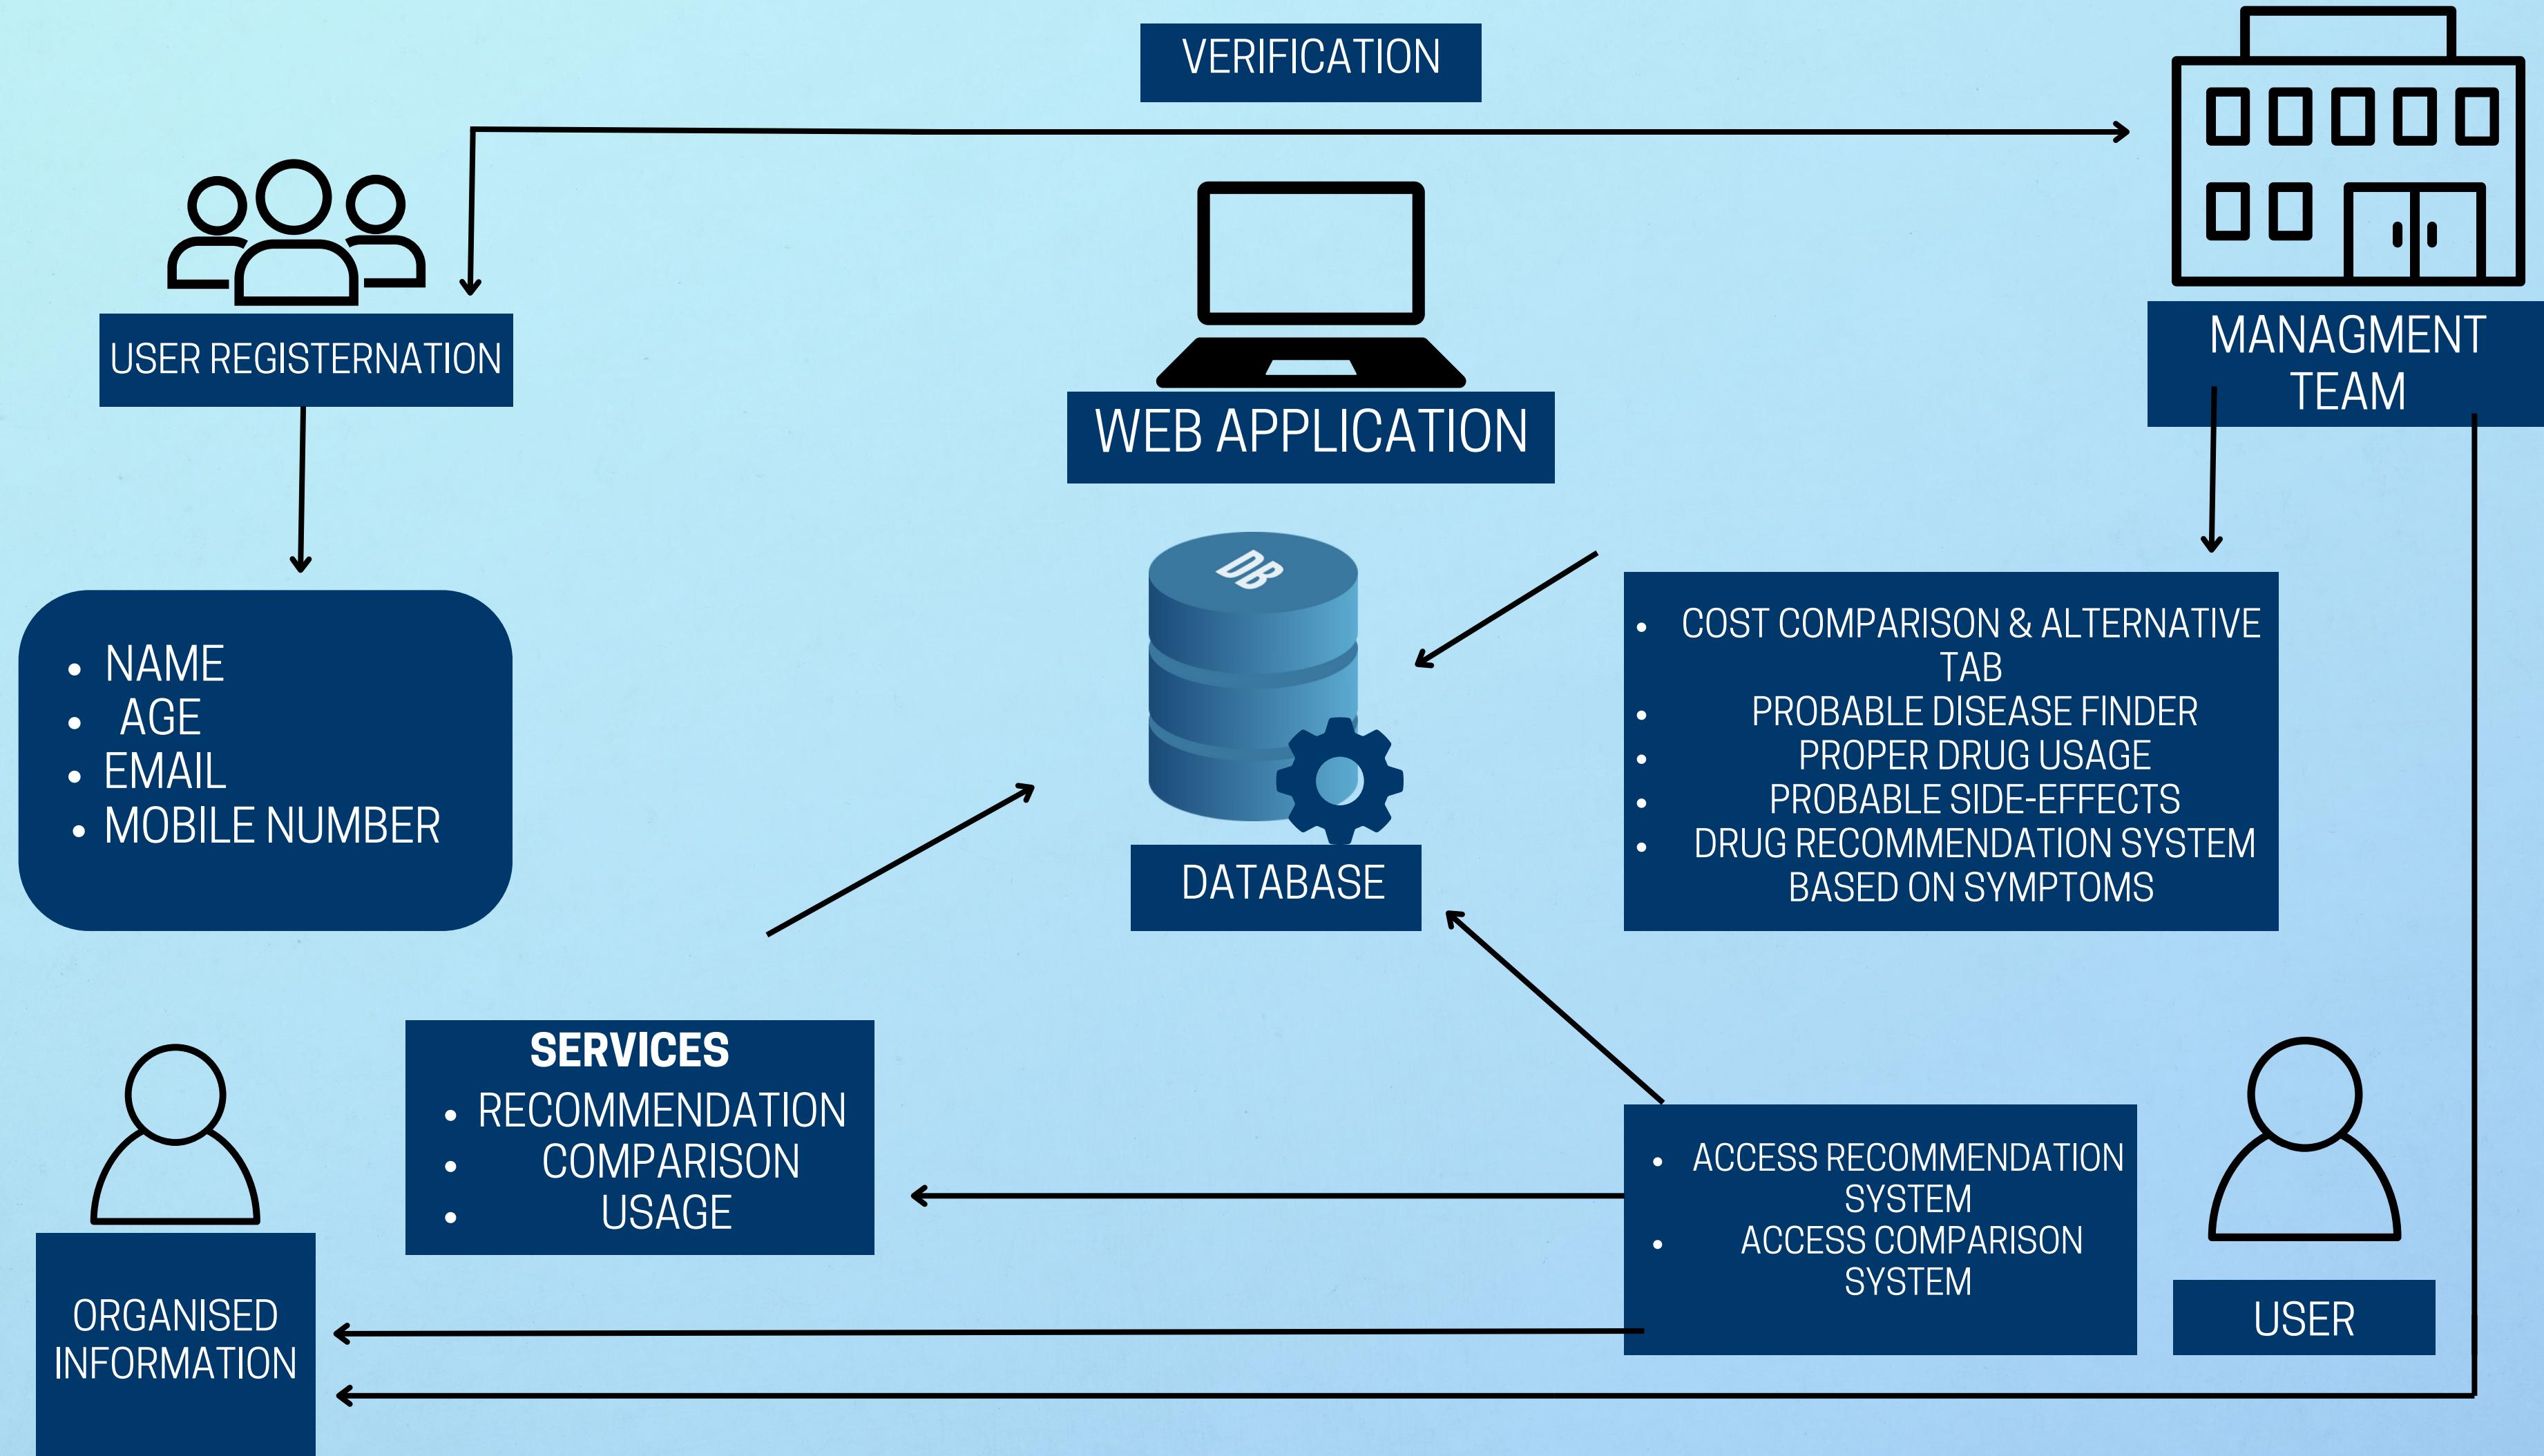

THE PROBLEM

- Many people struggle to find reliable, affordable medications, often unaware of more cost-effective alternatives from different companies. Additionally, they lack easy access to information on drug usage, side effects, and the right medicines for their symptoms.

SOLUTION DETAILS

- # A web application to be build with a portal for users to access the services.
- # The app will pool the information from open-source APIs from government health databases.
- # The user will need to register on the app using their email or mobile number.
- # User will be asked to provide their name, email or mobile number and their age.
- # The database of the app will be checked and updated by a specific team on a regular basis to maintain reliability.
- # Separate sections will be created of the service including: 1.Cost comparison and alternatives suggestion 2.Probable disease finder 3. Drug usage 4.Probable side-effects 5. Medicine recommendation provider based on symptoms(not 100% advised to rely on)

DEMO OF PRODUCT / KEY FEATURES

- PROTOYPE
 - i. Homepage with a search bar for drug names.
 - ii. Probable disease finder: Symptom input screen and results.
 - iii. Drug comparison: Show pricing from multiple companies, along with usage information.
- Key Features:
 - Compare prices.
 - Probable disease finder.
 - Detailed drug usage.
